

ABOUT LEED®

The LEED Green Building Rating System is the national benchmark for the design, construction, and operations of high-performance green buildings.

To earn LEED certification, a building project must meet certain prerequisites and performance benchmarks in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection, and indoor environmental quality.

Documentation demonstrating that the project has successfully met the sustainable design and performance criteria set forth within the LEED Green Building Rating System must be submitted, reviewed, and approved by USGBC before the building is officially certified.

Visit the U.S. Green Building Council's web site at www.usgbc.org to learn more about LEED.
